Streamlined processing

All collection & transportation—intermediate processing—final disposal processes are thoroughly streamlined. We own 5 incineration facilities, 3 chemical treatment facilities as well as solid insolubilization facilities, composite facilities, final disposal sites nationwide.

Nationwide waste processing

We process many kinds of waste products thanks to a nationwide collection & transportation system and clusters of intermediate processing plants. We own 8 collection / transportation / transfer / storage facilities nationwide.

Processing of hard-to-process substances

We process a wide range of waste products, from industrial waste to chemicals and difficult-to-process substances (dangerous materials / harmful substances / freon / PFC / PFOS, etc.).

PCB-processing service

A service designed to detoxify PCB (lighting ballasts / transformers / condensers / electric devices / contaminants) and reduce processing costs.

Waste reduction proposals

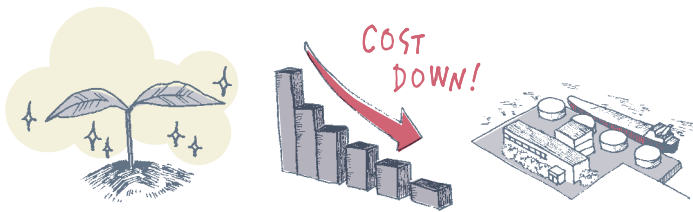

For a future inspired by the "never discard" motto. Zero-emission proposals based on purchasing products containing valuable metals and reusing processing residues.

Waste recycling

Reducing waste itself from the perspective of "recycling". One-stop solutions for waste-related problems.

2 Soil pollution management business

Bringing to zero the risks of contaminated soil.

Purification of a wide range of contaminated soils (excluding PCB and dioxins)

Achieving cost reduction through efficient transportation and processing

Large-scale processing facilities adjacent to private wharves

We conduct all the required investigations to assess contamination levels when developing or purchasing / selling land. When contamination is detected, we also offer a variety of services, from conduction of in-depth investigations to treatment of contaminated soil, at competitive prices.

3 Comprehensive plant/ engineering business

We offer extensive know-how on plant development acquired during many years.

In-house designing of equipment and disposal sites

We cover all stages of planning, from designing to operating facilities

Extensive track record and know-how

We satisfy our customer's needs by putting to use over half a century of experience in the industrial waste disposal field in designing, building, maintaining and operating waste disposal facilities and environment-related facilities, both new and old.

4 Commissioned research and analysis business

We provide the best advice on the strength of data collected over the course of many years.

Every plant in the Sanyu Group is equipped with an analysis lab; the extensive know-how in the analysis of samples and processing residues analyzed over the years is used not only for in-house analysis but also for contract research.

5 Environment-related services business

Delivering equipment and services aimed at protecting the environment.

We conduct consulting and environmental monitoring, process monitoring, sales and development of other advanced measuring equipment for research & development, as well as provide advanced monitoring service by various fixed-point and mobile observation techniques.

6 List of projects

Protecting the environment and natural resources by saving / creating energy.

Recycling model

SAIKAI PROJECT

Building a food recycling loop.

For fertilizers and cattle feed

Collection of bean dregs

For high quality food products

To stores as raw ingredients for various foods

Saving energy

ENTECH

Doing what can be done to save energy in companies and plants.

Optimizing the use of energy

Optimizing facilities that use energy

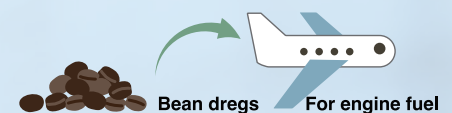

Optimizing the procurement of energy

Creating energy

CFE (Challenge Future Energy)

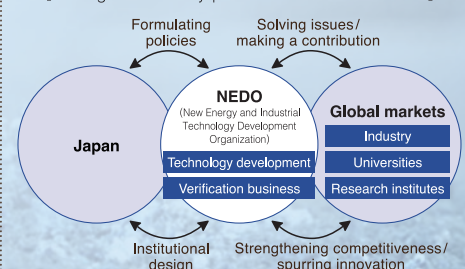

A path to the future through the power of creation.

Projects for creating domestically-produced fuel by making "bioethanol" and oil from coffee bean dregs not used for making feed or fertilizers

NEDO outsourcing business

[Making domestically-produced fuel from cellulose]

To us, waste is so much
more than mere waste.

We are betting
on the infinite potential of waste.

The environment and natural resources
of the future vary with one's perspectives and ideas.

The future of waste.

Whether you see it as “waste” or a “future resource”, it depends on your perspective.
We look at the environment and resources of the future from new perspectives and ideas.
